

When would the project stop working?

Example 1: Peach pulls an invalid item, if there isn't a set item list, peach could pull any item.

Example 2: What if the moves that have charges (Giant Punch, Needles) never stop charging? There has to be a limit to their charges.

Example 3: In the case of characterStocks, the project could stop working if the stocks are negative, so ensuring that stocks can only go down to 0 is important.
